## Responsive Design

Angular 5 UI Components are powered by HTML5 & CSS3 with Responsive design enabled by default.

## Amexio UI Components

Amexio Varanasi v1.0 is our first release (June 7) with almost 30 UI Components. With the v4.2 release in May 2018, we touched 110+ UI Components.

## Themes

70+ Themes supported out of the box. 50+ Material Design themes and 16 Amexio themes.

## Amexio Charts

Charts based on Angular platform, contains all basic chart types like Pie, Bar, Line, Bubble etc.

## Amexio Dashboards

Amexio Dashboards will contain Gauges, Data Point Widgets, Data Point Charts, with built-in Dashboard Templates.

## Amexio Maps

Maps will help you plot your enterprise data on Maps.

API Docs Feedback

The screenshot displays the Amexio Colors theme builder interface. On the left is a sidebar with navigation links: Home, Amexio Colors (which is highlighted in pink), Layouts, Panels, Form Inputs, Form Actions, Data, Media, App Navigation, Charts, Dashboard, Maps, and Enterprise. The main content area features a large title 'Amexio Colors' with a subtitle 'Fully automated Theme Builder which picks up the right colors for you!'. Below the title are four tabs: Material Design (which is selected and underlined in red), Amexio, Colors, and Getting Started. The interface is divided into six sections, each showing a different color theme applied to a sample dashboard. The sections are labeled 'Army Olive', 'Ash Stone Black', 'Black', 'Blue', 'Blue Grey', and 'Bruntor Tangerine'. Each section shows a screenshot of the dashboard with charts and graphs, followed by the text 'Version: 4' and 'Style: Material Design'. At the bottom of each section is a 'Test' button.

# A CANVAS

# A CANVAS

## Personal Edition

### Drag and Drop

Drag and Drop Environment to create Web and Smart Device Responsive Apps. Code will be auto generated by the Canvas.

### Hot Deploy

Any changes in the Visual IDE will be immediately reflected in the App using Hot Deploy technology. Commit code to GitHub Public or Pvt Repository

### Service Bindings

Connect to your backend systems using Service Bindings. Out of the box support for Restful API's.

### Behaviors & Relationships

Create sophisticated relationships between UI Components actionable buttons. Add Behaviors as part of your Business logic.

### Authentication

Configure the service authentication mechanism to ensure the auto generated code is ready for production deployment.

## Standard Edition

### Multi User Project Management

Map projects for multiple users. Project Tracking

### Mobile Apps

Create your Smart Device Apps - Android Binary will be automatically created and iOS project will be ready for build.

All Personal Edition Features +

### Progressive Web Apps

Web App which combines the best of Web and Native Apps. Installable, works offline. Supports Web and Smart Devices, Sharable.

### Design Commit

Multi Developer Design commit.  
Design conflict resolution.  
Design Versioning.

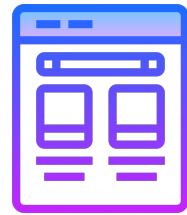

### Design Encryption

Design is encrypted using standard Encryption algorithms. More security for your design documents.

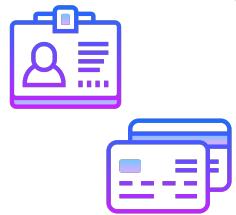

# Enterprise Edition

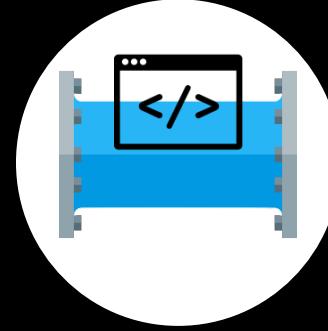

## Design Templates

Design Templates helps you to quick start the App development. Industry & Device specific templates will be available.

## Custom Templates

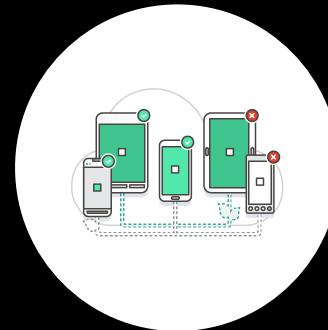

Developer can create and store Custom templates by grouping components from reusability perspective.

All Standard Edition Features +

## Code Pipeline

Commit your code to SVN or GitHub, Build Management, Unit testing of the code.

## Device Farm

Automated Device Testing using Device Farm. Testing the Android Apps in Multi Hardware OS versions.

## Theme Builder

Apart from the built-in themes, Theme Builder will help you to create Themes based on Amexio or Material Design Standards.
